DEVOPS ADVANCED PROFESSIONAL CERTIFICATION · DAPC

Session 5

Kickoff: Claude, GitHub and Jira as our way of working

SESSION 5

Agenda

Block	Min
Get to know each other	30
Course rules: how your work is checked	20
Setup with Claude: GitHub and Jira	60
Break	10
First real ticket: from Jira to a merged pull request	60
The Three Ways of DevOps, explained with Claude	30
What is a skill? Discussion	20
Closing	10

INTRODUCTIONS

Get to know each other

1

What is your job today? Do you build, test, release or support software?

2

Which of these have you used: Git, CI/CD, Docker, Jira?

3

How do you use AI at work today?

4

What do you want to be able to do after this course?

COURSE RULES

The course in four numbers

12
sessions of 4 hours, from 5 to 16

6
participants, in two teams of 3

0
exams: we check your work in GitHub and Jira

1
project we build together: Café Cumbre en línea

Optional, not part of the course: the CertiProf DAPC exam. 40 questions, 60 minutes, 80 % to pass.

COURSE RULES

Every change follows the same path

1 **Ticket**
Take it in Jira

→

2 **Branch**
Name has the ticket number

→

3 **Change**
Built with Claude

→

4 **Pull request**
Linked to the ticket

→

5 **Checks**
Tests pass (CI), a classmate reviews

→

6 **Close**
Merge, then comment in Jira

One ticket, one branch, one pull request.

COURSE RULES

Your work trail shows your progress

</>

Pull requests

Linked to a ticket, tests pass, small and clear

☺

What you did, the evidence, what you learned

★

Skills

Instructions for Claude that you save in the repo and reuse

We also record who comes and who takes part in group activities.

COURSE RULES

Branching strategy

`main`

Stable. Only tested code that is ready to release.

↑ Release: develop goes to main

`develop`

Integration. All finished work is put together here.

↓ Start from develop ↑ Pull request back to develop

`feature/SCRUM-12` `bugfix/SCRUM-12`

One short branch per ticket: new work or a fix.

Every branch starts from develop.

COURSE RULES

Best practices

Commit message

```
SCRUM-12: fix site title
```

Pull request title

```
SCRUM-12: Fix site title
```

Branch from develop. Always start from the latest version.

One ticket. One branch, one pull request.

Type first. Start with feature or bugfix, then the ticket number.

Keep it short. Merge in a day or two.

Never push to main or develop. Both are protected. Use a pull request.

Clean up. Delete the branch after it is merged.

SETUP · YOU DO IT, CLAUDE GUIDES YOU

Set up your tools in five steps

1. Accept the GitHub invitation to the course repository
2. Accept the Jira invitation to the SCRUM project
3. Open Claude and sign in with your account
4. Connect GitHub to Claude
5. Connect Jira to Claude

*Detailed instruction at docs/setup-tools.md

SETUP · CHECK THAT IT WORKS

Ask Claude three questions

1. `List the open tickets in the SCRUM Jira project.`
2. `Show me the files in the devopscourseeng/devops-expert-dapc repository.`
3. `Which ticket in SCRUM is assigned to me?`

If Claude answers with real tickets and real files, you are connected.

SETUP · IF SOMETHING FAILS

Common problems and what to try

What you see	Try this
Claude cannot see the repository	Check that you accepted the GitHub invitation and that you connected the same GitHub account you accepted it with.
Claude cannot see the SCRUM tickets	Check that you accepted the Jira invitation, then reconnect Jira and allow access to the SCRUM project.
Your plan blocks a step	Free accounts have usage limits. Tell the instructor and pair up with a classmate for that step.

YOUR FIRST REAL TICKET

From Jira to a merged pull request

1. Take your ticket in Jira and move it to In Progress
2. Create a branch from develop: feature/SCRUM-N or bugfix/SCRUM-N
3. Solve the ticket with Claude as your partner
4. Commit with the ticket number in the message
5. Open a pull request whose title starts with SCRUM-N
6. Wait until the automatic tests (CI) pass
7. Ask a classmate to review it and answer their comments
8. Merge, comment on the ticket and move it to Done

YOUR FIRST REAL TICKET · WHILE YOU WORK

Use Claude well, then finish the job

Good things to ask Claude

“Read SCRUM-N and explain what I need to change.”

“Propose the smallest change that fixes it, and explain why.”

“Review my changes before I open the pull request.”

Done means

The pull request is linked to the ticket.

The automatic tests (CI) pass.

A classmate reviewed it.

The ticket has a closing comment: what you did, the evidence, what you learned.

THE THREE WAYS · IN PAIRS

Teach one of the Three Ways in three minutes

Pair 1: First Way, flow

Pair 2: Second Way, feedback

Pair 3: Third Way, learning

Steps
1. Ask Claude to explain your Way, with an example from Café Cumbre
2. Check what Claude said against the official slides 64–76
3. Prepare: the idea, one example, the skills it needs (capabilities)
4. Present to the group
5. Talk together: what did Claude get right or wrong?

The Three Ways of DevOps

1

Flow

From left to right, from idea to customer. Make work visible, work in small batches, limit work in progress and remove bottlenecks (constraints).

In Café Cumbre: small pull requests and CI.

2

Feedback

From right to left. See problems when they happen, fix them together (swarm), and build quality in from the start.

In Café Cumbre: tests, metrics and alerts, coming up.

3

Learning

Keep learning and trying new things. Share what one person learns with everyone, and practice failures on purpose to become stronger.

In Café Cumbre: reviews after incidents (postmortems), Game Day and shared skills.

DISCUSSION

What is a skill?

A skill is a short set of instructions that Claude follows whenever a task comes up.

Let’s talk about it

1 Which task do you repeat every week?

2 Which of those could be written as steps?

3 What would Claude need to do it your way?

```
---
name: open-course-pr
description: Open a PR that follows course rules.
---
1. Branch from develop, named feature/SCRUM-N.
2. Title the PR "SCRUM-N: summary".
3. Link the Jira ticket in the description.
4. Check CI is green before asking for review.
```

Next class: we build our first skill.

CLOSING

What you take with you today

- Claude connected to GitHub and Jira
- A ticket closed through a pull request
- The rules of your work trail
- Ideas for what a skill could automate

Look back at your answers to question 4. What is still missing?

NEXT SESSION

Session 6: tests, TDD, continuous integration and trunk-based development

We build our first skill.

Before then: finish any open pull request, leave your closing comments in Jira, and pick one task you repeat that could become a skill.
